New Approaches to Accelerate the Universal Adoption of Clean Cooking

4 Weeks Online Course | 11th May 2026

The Problem is Urgent!

Nearly 800 million people in Sub-Saharan Africa still cook with polluting fuels. Progress toward the global 2030 clean cooking target is dangerously slow, and the cost of inaction stands at \$791 billion per year in health, gender, and climate damages. The world needs faster, smarter solutions. This course equips you to deliver them.

Why This Course?

Offered by the African School of Regulation (ASR), in partnership with IIT-Comillas University, Sustainable Energy for All (SEforALL), KTH Royal Institute of Technology and Modern Energy Cooking Services (MECS), this short online course tackles the regulatory, financial, and technical barriers slowing clean cooking adoption in Africa and gives you the practical tools to overcome them.

What You will Walk Away With

By the end of 4 weeks, you will be able to:

- Understand existing regulatory and financial models for clean cooking in Africa
- Evaluate the application of geospatial planning tools to design cost-effective national strategies
- Analyse real-world case studies from across the continent
- Develop reform proposals grounded in evidence and impact

Who Should Apply?

- Energy regulators
- Government ministries
- Utilities
- Private sector professionals
- Investors
- Academics
- Development organisations
- Anyone driving clean energy change in Africa and beyond.

How It Works

4 modules. 1 per week. Fully online.

Course Format

Each week combines a live 2.5-hour class, expert panel discussions, a discussion forum, and a short personal assignment applying the week's content to a country of your choice.

Optional office hours available for extra support. Classes run 9:00–11:30 AM GMT with simultaneous French translation.

Certificates

Certificate of Participation: Attend all classes, complete quizzes & assignments.

Certificate of Excellence: All of the above, with distinction-level assignment scores.

Module 1: Situation & Challenges of Clean Cooking Access in Africa

Module 2: Cooking Technologies including Costs, Options & Business Models

Module 3: Integrated Clean Cooking Planning Tools

Module 4: Hands-On Planning Tool & Real-World Case Study
